Clay Electric Cooperative Selects Clearion Software

Atlanta, GA—Clearion Software LLC today announced that Clay Electric Cooperative, the Florida-based member-owned electric power supplier, has selected Clearion’s leading vegetation management solution as the principal technology to strengthen its work planning, contractor engagement and reporting practices.

“We’re excited to work with Clearion to implement their robust, off-the-shelf software. The flexibility of their system allows Clearion to conform quickly to our specific operational and regulatory environment,” said Mike Grantham, Division Chief Operations Support, Clay Electric. “We were seeking a powerful yet adaptable solution to bolster our vegetation management practices. Clearion’s technology allows us to increase the levels of accuracy and service we provide to our internal and external customers.”

The use of Clearion technology will enable Clay Electric to provide real-time access to their field crews and office personnel, giving each immediate visibility to, and management of, electronic maps, right-of-way notes and work planning documents in order to streamline operations. Clay elected to utilize Clearion’s highly secure server hosting option, speeding deployment and lowering total cost of ownership, while providing Clay Electric complete data control and ownership through automated database synchronization to Clay’s on-premise servers. The mobile data management software, along with Clearion’s powerful on-board reporting and analytics tools, will give Clay the ability to identify the costs and hours associated with contractors and in-house personnel, consolidate and centralize in-house reporting, and eliminate redundancy and duplication of efforts.

“The leading U.S. cooperatives are adopting state-of-the-art vegetation management technology and Clay Electric is one of the forerunners in this space,” said Chris Kelly, Senior Vice President, Clearion Software. “We’re excited to form this alliance ensuring simplified yet more effective field management and adherence to operational mandates.”

About Clay Electric Cooperative: Clay Electric is an incorporated, member-owned, not-for-profit electric power supplier, democratically organized and controlled by those it serves. Formally organized in 1937, the co-op has traditionally been known for its excellent service. The co-op is also a Touchstone Energy cooperative—a national alliance of local, member-owned electric cooperatives committed to high standards of service. Headquartered in Keystone Heights, Florida, the electric co-op is one of the largest in the United States. For more information, visit clayelectric.com

CLEARION SOFTWARE

About Clearion Software LLC: Clearion is a leader in mobile technology for planners, arborists, inspectors, auditors, and line clearance and maintenance crews. Clearion works with leading utility and infrastructure companies across the globe to solve complex operational challenges. Clearion delivers solutions for managing multi-year maintenance programs, large scale damage assessment incidents, and infrastructure design and construction projects.
