Clearion X 3.0 Release Notes

Clearion is pleased to announce the release of Clearion X version 3.0! This major release expands on the proven success of our flagship field app, enabling your teams to work smarter, faster, and safer in the field.
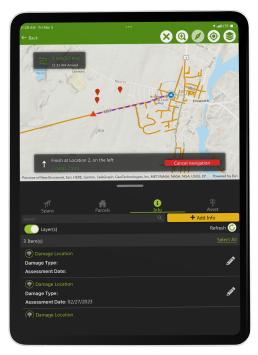

Clearion X 3.0 is available in the public app stores in December 2023.

Clearion releases are backward compatible, so you and your colleagues will not see many differences or have any work disruptions after upgrading. New functionality like geofencing, sorting, and smart form controls are enabled via configuration, so please reach out if you would like to take advantage of the latest and greatest technology we have to offer. All clients will immediately receive bug fixes and core enhancements.

Additionally, we are rolling out our first-ever official beta program to test our redesigned offline workflows. If you would like to participate in this beta program, please reach out.

New Functionality

- **Geofencing:** based on the user's current location, send push notifications or trigger data automation to inform users about their surroundings and safety issues
- **Navigation:** search for addresses, select points on the map, or choose tasks on the work list to build multi-stop routes to find the most efficient plan for the day, and then engage turn-by-turn directions to navigate to the next stop
- **Required Fields:** make users fill out all necessary fields, or even meet more complex data validation, ensuring high-quality field data
- **Sorting:** users can now sort lists and dropdowns by what matters most to them, making finding priority work a breeze
- **Expanded PDF Reports:** in addition to displaying field data and capturing user signatures, users can now summarize information across entire properties or work areas in one form
- **Standalone tables:** enable new solutions and data models, particularly for asset inspections and maintenance
- **Real-time data:** automatically pull in new data from colleagues in real-time when working online
- **Long-term support:** built on the industry-leading ArcGIS Maps SDK with support until 2027
- **Revamped offline mode (beta):** take larger areas offline faster by loading data in advance, saving server resources and field users time; please inquire about being a beta client
- **Additional items include:** clearing date fields, offline package recovery, increased tab options, Arcade automation, updated branding, 100+ bug fixes
